Apps for Content Management

Content Management Systems (CMS) are applications designed to manage dynamic content for websites.

All CMS applications have the ability to manage news or blogs and all include a templating system that allows the appearance/style of web pages to be controlled. The more advanced applications can include a near endless list of additional features, including: categories; commenting; user logins; polls; statistics; file managers; FAQ managers; and so on.

CMS applications generally fit into the following loose categories: Blogs (also known as weblogs), CMSs, Portals (modular features that can be added into a standard three-column page layout), and Frameworks (do-it-yourself systems).

WordPress blog	Drupal cms	Known cms	Omeka cms	Scalar education	Anchor CMS blog	b2evolution blog	Dotclear blog	Geeklog blog	LifeType blog	PivotX blog	Serendipity blog	Textpattern blog	CMS Made Simple cms	concrete5 cms	Contao cms

Category [Education](#)
Current Version 2.0.3
Last Updated 7 March
Languages English

Mukurtu (MOOK-oo-too) is a grassroots project aiming to empower communities to manage, share, and exchange their digital heritage in culturally relevant and ethically-minded ways. We are committed to maintaining an open, community-driven approach to Mukurtu's continued development. Our first priority is to help build a platform that fosters relationships of respect and trust.

Mukurtu

Search for an application

Install

Welcome to the Installatron install wizard! This wizard will guide you through the installation of Mukurtu.

The install process will add an instance of the selected application to your domain. This will create the files and directories of the software, and a database (if used by the application).

Location

Please select a location to install Mukurtu.

The location is a combination of a domain and a directory that together determine where the files will be installed and where the application will be viewed in a web browser after installation.

Domain

Directory (Optional)

`http://demos.mukurtu.org/
/home/mukurtus/public_html/demos/`

The domain and directory selected above represent a URL (a web page link) and also a physical path on the server's hard drive, both of which are shown here:

Fill in the installation information as requested, starting with your domain,

Select the version of Mukurtu to install.

Version

2.1.3 (recommended)

Language

English

The end user license agreement outlines how the software may be used, and can include rules on commercial use, modification, and distribution, along with information on pay-for versions of the application.

Mukurtu 2.1.3 EULA

- I accept the license agreement
 I do not accept the license agreement

Automatically update the installed application immediately as new versions become available.

Automatic Update

- Do not automatically update.
 Update to new **minor versions** and **security releases**.
 Update to any new version.

Updates execute between midnight and 6AM server time and email notifications are sent with the result of each update.

After 14 days the created backup automatically expires and is deleted to free disk space. However, prior to expiration the created backup can be retained by selecting the option from your "My Backups" tab.

Automatic Update Backup

- Create a backup and automatically restore the backup if the update fails.
 Do not create a backup.

Advanced

We suggest using the latest version of Mukurtu CMS, and selecting '**Do not automatically update**'. You will need to run updates when they are released. Click '+install' when ready.

Mukurtu sites with extensive customizations should take care when updating, please contact us with any additional questions.
